QUESTION SET

Dolphins

1. Which order in the animal kingdom to Dolphins belong to?

a. Cetacea

b. Insectivores

c. Anseriformes

d. Crocodilia

2. What is the function of the dorsal fin?

a. Reproduction

b. Digestion

c. Swimming

d. Respiration

INFORMATION

Introduction

Dolphins are cetacean mammals closely related to whales and porpoises. They are found worldwide, mostly in the shallower seas of the continental shelves and are carnivores, eating mostly fish and squid.

Chapter 1

Chapter 2

Chapter 3

CHAPTER 1

Dolphins have a streamlined fusiform body, adapted for fast swimming. The tail fin, called the fluke, is used for propulsion while the pectoral fins, together with the entire tail section, provide directional control.

The dorsal fin, in those species that have one, provides stability while swimming. Though varying by species, basic coloration patterns are shades of grey, usually with a lighter underside and often with lines and patches of different hue and contrast.
